

## Introdução

	Orientações do catálogo	C3-C4
	Sistema de designação	C5-C7
	Visão geral do sistema	C8-C37
	MasterGuide	C38
	Descrição e visão geral das classes	C39-C44
	Aplicação	C47-C62

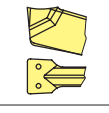

## Aplicação

	Visão geral	C63-C64
	Corte	C65-C73
	Canal e torneamento, externo	C74-C80
	Canal e torneamento, interno	C81-C86
	Canal de anel elástico, usinagem externa	C87-C104
	Canal de anel elástico, usinagem interna	C87-C104
	Canal com raio, usinagem externa	C105-C120

## Aplicação

	Canal com raio, usinagem interna	C105-C120
	Canal axial	C121-C130
	Rebaixo externo	C131-C134
	Rosca (torneamento)	C135-C143
	Rosca (Fresamento)	C145-C147

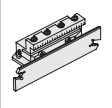

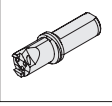

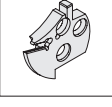

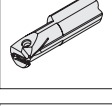

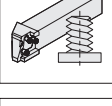

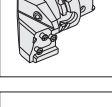

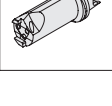

## Pastilhas

	Visão geral	C150
	Pastilhas para corte e canal	C151-C159
	Pastilhas de rosca	C160-C163

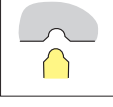

## Ferramentas

	Visão geral	C165-C167
	Porta ferramentas	C168-C175
	Módulos externos	C176-C187
	Porta ferramentas monobloco	C188-C197

**Ferramentas**

	Lâmina, bloco de fixação	C198-C206
	Barra de mandrilar	C207-C209
	Módulo interno	C210-C214
	Barra de mandrilar monobloco	C215-C217
	Ferramenta monobloco e módulo para rosca	C218-C222
	Porta ferramenta HSK-T	C171-C172
	Porta ferramenta UTS	C173-C174

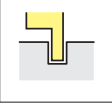

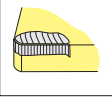

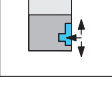

**Informação técnica**

	Rosca (torneamento, fresamento)	C247-C260
	Recursos do sistema - como usar o sistema	C261-C265
	Ferramenta especial GX	C266
	Aplicações possíveis adaptadores MSS	C267-C268
	Descrição dos componentes	C269

**Índice**

	Índice	G4
---	--------	----

**Informação técnica**

	Visão geral	C224
	Geral	C225-C232
	Tipos de desgaste, medidas corretivas	C233-C234
	Informações sobre o material	C235-C238
	Dados de corte	C239
	Aplicações possíveis - canal axial	C241-C246

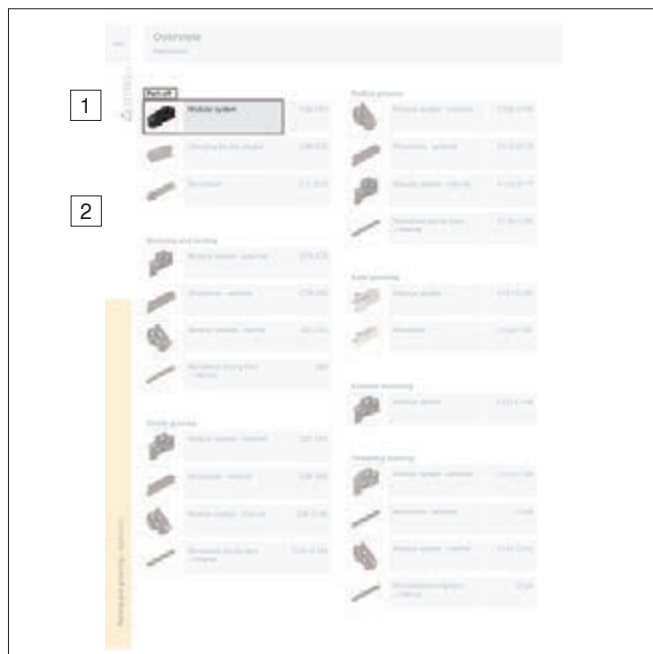

## Faça a escolha certa em poucos passos

1

### Seleção da ferramenta na seção sobre aplicações

1 Escolha na visão geral a aplicação solicitada

2 Escolha o sistema de ferramenta solicitado

2

### Escolha o tipo e o tamanho do adaptador

3

### Todos os módulos são mostrados na versão direita

4

### A ferramenta ou módulo podem ser escolhidos de acordo com o corte e o canal e profundidade ou largura solicitados

1 Informações detalhadas da ferramenta solicitada

2 Informações sobre pastilhas adequadas

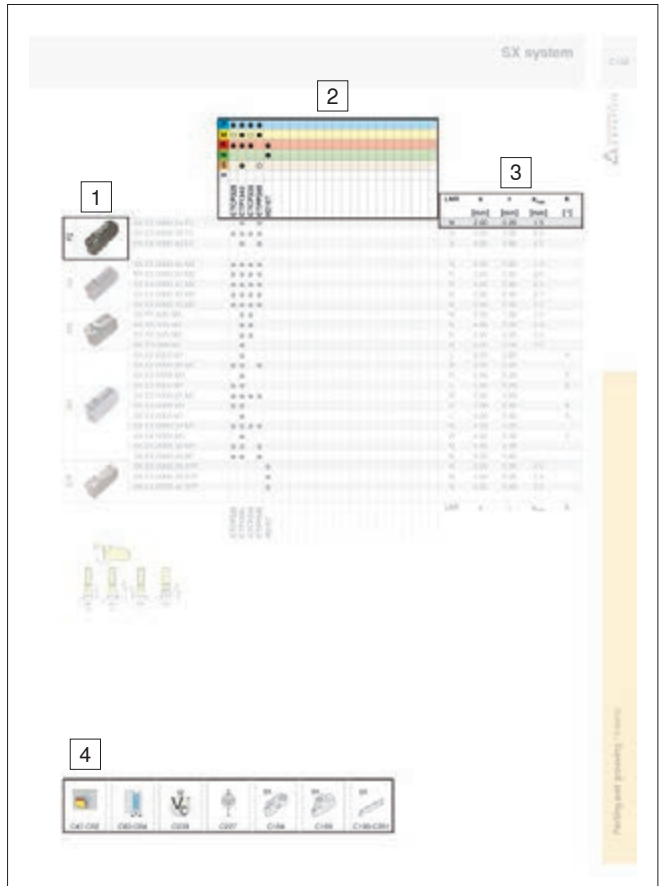

5

### Seleção da pastilha

Após definição do sistema de ferramenta a pastilha é escolhida incluindo quebra cavaco e classe

- 1 Quebra cavacos
- 2 Classe de metal duro
- 3 As principais dimensões
- 4 Informações adicionais

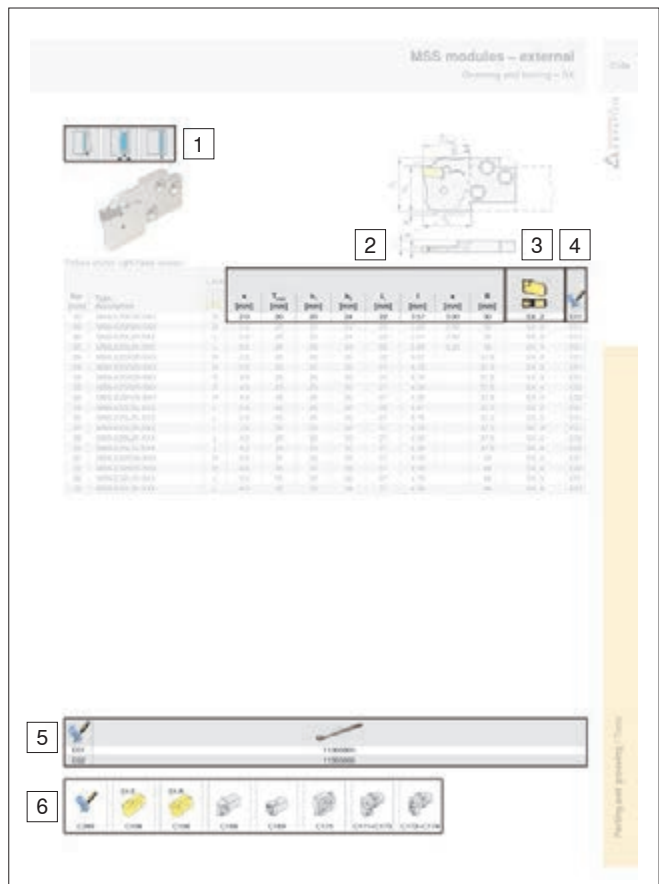

6

### Seleção da ferramenta

A página do produto mostra a gama de ferramentas/módulos com as dimensões principais e informações sobre os tipos de pastilhas

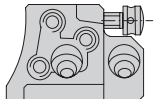

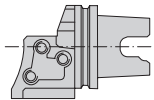

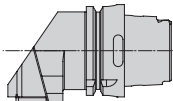

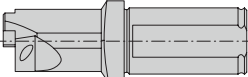

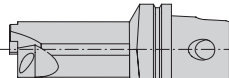

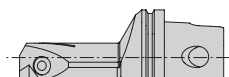

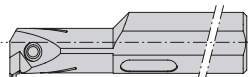

- 1 Aplicações possíveis
- 2 As principais dimensões
- 3 Referência de pastilha
- 4 Componentes
- 5 Visão geral dos componentes
- 6 Informações adicionais

## Diversificada gama de aplicações

Corte e canal abrange uma gama diversificada de aplicações e demanda, tecnologia avançada e projeto inteligente da ferramenta.

### Tecnologia avançada

- Formação de cavaco
- Evacuação de cavaco
- Paralela - corte plano e superfície do canal
- Acabamento de superfície
- Formação de rebarbas quando corta tubos
- Formação de pinos centrais na operação de corte
- $v_c = 0$  no centro da peça
- Aresta de corte principal aplicada totalmente

### Projeto inteligente da ferramenta

- Limitado, balanço longo
- Fixação da pastilha
- Rigidez
- Resistente contra quebra
- Fácil manuseio
- Economia

## MSS

### - sistema modular de corte, canal e rosqueamento

De forma a atender todas as demandas, ferramentas atualizadas têm uma estrutura modular.

#### Recursos do sistema

- Haste separada e porta ferramenta
- Mesma interface para todas as aplicações corte, canal e rosqueamento
- Estável, conexão precisa
- Extensível através de novos 'módulos'
- Fácil manuseio
- Características de fixação otimizadas para as várias aplicações

#### Flexibilidade

- Adaptável para trabalho de usinagem
- Um único sistema para todas as operações corte, canal e rosqueamento
- Especialmente adequado para ferramentas semi-standard

#### Precisão

- Alta precisão e repetibilidade quando trocar o módulo
- Tempo de preparação reduzido
- Alta qualidade das peças usinadas

#### Estabilidade

- Segurança na aplicação
- Possível corte, canal e torneamento longitudinal

#### Simplicidade

- Troca rápida do módulo no caso de quebra de ferramenta, curto tempo de máquina parada

#### Economia

- Inventário de estoque baixo fornece uma grande variedade de possíveis combinações
- Em caso de quebra de ferramenta é necessário somente trocar o módulo

#### Acessórios

- Componentes adicionais para todas as peças e materiais

**Corte, canal e torneamento GX**

**Corte e canal FX**

**Corte, canal e torneamento LX + SX**

**Canal axial AX + GX**

**Torneamento de rosca TC**

### Conexão forte

#### Módulo desconectado

o Folga entre o módulo e a face de localização para fixação axial

#### Módulo fixado

o Fixação axial com face de localização  
o Conexão sem folga, portanto maior estabilidade

### Características das fixações

#### LX / GX / AX

#### Fixação da pastilha Active

Parafusos 1, 2 e 3 são usados para fixar o módulo. A pastilha é auto-fixada. A pastilha é fixada através da deformação plástica no módulo através do parafuso adicional 4.

#### FX / SX

#### Pastilhas auto-fixadas

Parafusos 1, 2 e 3 são usados para fixar o módulo. A pastilha é auto-fixada.

#### GX / TC

#### Fixação da pastilha Active

Parafusos 1, 2 e 3 são usados para fixar o módulo. **Importante:** fixar o módulo com parafuso 1, depois parafuso 2. Em seguida a pastilha é fixada através do parafuso 3.

**Corte, canal, torneamento longitudinal, canal axial**

$T_{max} = 7 - 21 \text{ mm}$   
 $s = 2,0 - 8,0 \text{ mm}$

Canal de anel elástico

## Designação da pastilha

GX16- 2 E3.00N0.30

1

**1** Classe de largura <sup>1)</sup>

As larguras do corte e canal do sistema MSS são divididas em classes de larguras. Cada classe de largura representa certa gama de largura de corte.

<sup>1)</sup> O módulo e as pastilhas têm a mesma classe de largura. Esta combinação resulta na melhor segurança de aplicação possível.

# O tamanho da montagem

O tamanho da montagem é determinado pelas dimensões da haste do porta ferramenta MSS.

Desta maneira o porta ferramenta correto pode ser especificado no tamanho do módulo correto e vice versa.

As tabelas a seguir vão dar uma visão geral das classes de largura e tamanho das pastilhas para os tamanhos de montagem disponíveis.

## Designação da ferramenta

MSS- **E25** R00-2525L

A característica do sistema GX é de uma pastilha com dupla aresta com inúmeras possibilidades de aplicações. É principalmente aplicado para canal radial e torneamento. Graças a módulos especiais o sistema pode ser facilmente adaptado para canal axial e canal de anel elástico.

Para pastilhas GX uma gama de módulos e barras de mandril para canal interno estão disponíveis.

## Características do sistema

- Pastilha com dupla aresta
- Pastilha retificada e prensada

## Benefícios

- Boa economia
- Solução ideal para todas as situações

# Visão geral

Sistema AX

O sistema AX é para canal axial com diâmetros pequenos. Uma característica especial do projeto é que a pastilha não precisa de apoio na área de corte.

## Características do sistema

- Pastilha neutra
- Ferramenta monobloco e modular

## Benefícios

- Pode ser aplicado em ferramentas esquerdas e direitas
- Solução ideal em termos de custos para cada aplicação

No sistema SX a pastilha é auto-alojada e fixada com máxima força de fixação no alojamento. Posição precisa da aresta de corte e fácil manuseio são garantidos.

## Características do sistema

- Fixação Active
- Alojamento da pastilha com encosto fixo
- Fácil manuseio
- Ferramenta otimizada FEM

## Benefícios

- Pastilha não vai sair da lâmina de corte
- Posicionamento correto da aresta de corte
- Troca rápida da pastilha
- Estabilidade máxima também no torneamento longitudinal

# Visão geral

Sistema LX

O sistema LX é caracterizado por alta resistência e estabilidade. É o mais apropriado para a produção de canais profundos e largos bom como para corte de barras de diâmetros grandes.

## Módulo de corte e canal LX

## Aplicação dos módulos LX

- Corte
- Canal e torneamento
- Canal axial com  $D > 500 \text{ mm}$
- Canal interno e torneamento com  $D > 200 \text{ mm}$

## Características do sistema

- Construção robusta
- Fixação da pastilha Active
- Pastilha com raio completo

## Benefícios

- Segurança na aplicação, alta resistência e estabilidade
- Apropriado para torneamento em cópia

O sistema FX é caracterizado pela pastilha auto-fixada de uma aresta de corte para canal profundo e diâmetros grandes. FX é integrado diretamente no sistema MSS por meio dos respectivos módulos. Além disso, as soluções lâmina/bloco e ferramentas monobloco estão disponíveis.

### Características do sistema

- Pastilha auto-fixada
- Lâmina ajustável
- Pastilha de uma aresta de corte, somente prensada

### Benefícios

- Fácil manuseio, sem peças de fixação
- Corte e canal profundo, balanço ideal ajustável
- Economia para corte e canal profundo

# Visão geral

Sistema MaxiClick

MaxiClick é caracterizado por pastilhas de corte que consiste em 4 ou 5 elementos de corte. A aresta de corte utilizada é quebrada lateralmente um estilete.

## Característica do sistema

- Largura extremamente estreitas de corte e canais são possíveis
- Excelente qualidade superficial podem ser conseguidas
- Multiplas operações de corte são possíveis

## Benefícios

- Menos desperdício de material
- Não é necessário trabalho de acabamento adicional
- Redução de custos de usinagem

Com o sistema TC a mesma pastilha pode ser utilizada para produzir roscas por torneamento ou fresamento. TC oferece inúmeras vantagens que são de importância decisiva para muitas aplicações de rosqueamento.

## Característica do sistema

- Torneamento e fresamento com a mesma pastilha
- Configuração da pastilha neutra

## Benefícios

- Flexibilidade, pouca variedade e custos
- Rosca direita e esquerda são possíveis utilizando somente uma pastilha
- Inventário reduzido

Sistema TC para torneamento de rosca é uma parte integrada do sistema MSS. Comparado com o tradicional, o sistema TC oferece uma série de vantagens que são de importância decisiva para muitas aplicações de rosqueamento.

### Sistema TC

- A configuração neutra da pastilha torna possível operações de usinagem em ambas as direções
- Somente uma pastilha de rosca por passo, para perfil parcial e rosca Whitworth; apenas duas pastilhas de rosca (interno - externo) por passo para rosca ISO
- Inventário reduzido
- Boa formação de cavaco através do quebra cavaco com ângulo de saída  $+10^\circ$

- Melhor eficiência econômica através
- Tempo de usinagem reduzido
  - Menos trocas de ferramentas
  - Estabilidade melhorada, pequeno balanço
  - Economia de material
  - Torneamento de rosca entre possíveis ressalto
  - Menor número de ferramentas e pastilhas

### Sistema convencional

- Pastilha com versão para rosca direita e esquerda, portanto, operação apenas em uma direção
- Para cada passo 4 pastilhas de rosca são necessárias (direita - esquerda, interno - externo)

- Para este método de usinagem 2 ferramentas são necessárias
- Perda adicional de estabilidade e material são causados por grandes balanços

Sistema TC

o Fácil acesso a peça, portanto, o uso do contra ponto também é possível com diâmetro de rosca pequeno

Sistema convencional

o Difícil acesso à peça  
o Perigo de colisão

o Fácil de aplicar, as ferramentas podem ser usadas em ambos os sentidos sem correção do ângulo de hélice

o Correção do ângulo de hélice necessária, portanto elevado grau de conhecimento na aplicação é necessária  
o Só pode ser operado em uma direção

Para roscas fresadas e / ou torneadas as mesmas pastilhas são utilizadas. Com hastes de ferramentas especiais, as quais caracterizam-se por construção compacta e modular, **roscas externas bom como internas** podem ser produzidas em

todos os centros de usinagem.

## Características do sistema

- Torneamento e fresamento com a mesma pastilha
- Fresamento de rosca com corte único
- A rosca é feita em um único passe

## Benefícios

- Flexibilidade, pouca variedade e custos
- Baixas forças de usinagem, grande balanço é possível, dados de corte alto ( $v_c$  e  $f$ ), fácil programação
- Sem interrupção ou degraus na rosca

**Material**

Com base na norma VDI 3323 o guia CERATIZIT divide os materiais em seis grupos principais (P, M, K, N, S, H). Para cada um é dado uma cor, de acordo com o sistema parcialmente adotado na ISO 513.

**Aço**

**Aço inoxidável**

**Ferro fundido**

**Metais não ferrosos e não metais**

**Ligas resistentes ao calor, titânio**

**Materiais endurecidos**

**Tipo de aplicação de usinagem**

Cada segmento de cor é dividido em três seções, e cada seção indica o tipo de aplicação de usinagem relevante:

**R = usinagem de desbaste**

**M = usinagem média**

**F = usinagem de acabamento**

● **Aplicação principal**  
○ **Aplicação estendida**

**Aplicação**

A área ideal de aplicação para cada pastilha é indicado por um círculo preto. Aplicações estendidas são indicadas por um círculo aberto. O Guia CERATIZIT fornece a você uma estrutura de fácil compreensão para escolher um produto e possibilita a redução do inventário de classes e geometrias.

 25  
 35 ISO P35  
 .  
 .  
 .

## Metal duro

- HW** Metal duro sem cobertura, constituído de carboneto de tungstênio (WC)  
**HT<sup>1)</sup>** Metal duro sem cobertura, constituído principalmente de carboneto de titânio (TiC) ou nitreto de titânio (TiN) ou ambos  
**HC** Metal duro conforme acima, mas com cobertura

## Cerâmica

- CA** Óxido de cerâmica, constituído principalmente de óxido de alumínio ( $Al_2O_3$ )  
**CM** Cerâmica mista, baseado em óxido de alumínio ( $Al_2O_3$ ), mas com diferentes componentes de óxido  
**CN** Nitreto de cerâmica, constituído principalmente de nitreto de silício ( $Si_3N_4$ )  
**CC** Cerâmica conforme acima, mas sem cobertura

## Diamante

- DP<sup>2)</sup>** Diamante policristalino

## Nitreto de boro

- BL<sup>2)</sup>** Nitreto de boro cúbico policristalino com baixo teor de CBN (40% - 65%)  
**BH<sup>2)</sup>** Nitreto de boro cúbico policristalino com alto teor de CBN (70% - 95%)  
**BC<sup>2)</sup>** Nitreto de boro cúbico policristalino com cobertura

<sup>1)</sup> Estes carbonetos são também chamados de 'cermets'.

<sup>2)</sup> Diamante policristalino e nitreto de boro cúbico policristalino são também chamados de materiais ultra-duros para usinagem.

### Avanço para torneamento longitudinal

- = 4,0 mm
  - = 3,0 mm
  - = 2,5 mm
  - = 2,0 mm
  - = 1,5 mm
- Raio r

# O caminho mais fácil para o sucesso

Aplicação recomendada

## -F1

- Geometria de corte excelente com baixas forças de corte
- Para materiais de baixa ou média resistência
- Particularmente adequado para corte em tubos e peças com paredes finas
- Excelente controle de cavaco também com avanço baixo
- Aresta postiça reduzida

## Avanço para corte e canal

## -M1

- Pastilha com chanfro negativo estreito
- Adequado para todas as usinagens de aços com alta resistência
- Classe de aplicação universal
- Para aços e ferro fundido cinzento

### Avanço para corte e canal

# O caminho mais fácil para o sucesso

Aplicação recomendada

## -R2

- Pastilha com excelente formação de cavaco para uma faixa de avanço ampla
- Aresta de corte muito estável
- Particularmente adequado para corte econômico quando a formação intensiva de rebarbas e pinos não causam nenhum problema

### Avanço para corte e canal

## -27P

- Particularmente adequado para **alumínio e metais não ferrosos**
- Pastilha com aresta de corte extremamente positiva e aresta de corte afiada
- Face de inclinação extra suave através do 'micro acabamento'
- Aresta postiça reduzida

### Avanço para corte e canal

# Visão geral

Aplicação

## Corte

	Sistema modular	C65-C67
	Bloco de fixação, lâmina	C68-C70
	Monobloco	C71-C73

## Canal e torneamento

	Sistema modular - externo	C74-C78
	Monobloco - externo	C79-C80
	Sistema modular - interno	C81-C85
	Barra de mandrilar monobloco – interno	C86

## Canal de anel elástico

	Sistema modular - externo	C87-C91
	Monobloco - externo	C92-C95
	Sistema modular - interno	C96-C100
	Barra de mandrilar monobloco – interno	C101-C104

## Canal com raio

	Sistema modular - externo	C105-C109
	Monobloco - externo	C110-C112
	Sistema modular - interno	C113-C117
	Barra de mandrilar monobloco – interno	C118-C120

## Canal axial

	Sistema modular	C121-C128
	Monobloco	C129-C130

## Rebaixo externo

	Sistema modular	C131-C134
---	-----------------	-----------

## Rosca (torneamento)

	Sistema modular - externo	C135-C138
	Monobloco - externo	C139
	Sistema modular - interno	C141-C142
	Barra de mandrilar monobloco – interno	C143

## Rosca (Fresamento)

Barra de mandril - TC

C145-C146

Fresamento de rosca - TC

C147

## Corte

Sistema modular, tamanho da montagem 20

## Ferramenta - ajuste

Aplicação recomendada

### Altura de centro

A altura de centro deve ser colocada dentro de uma tolerância de  $\pm 0.1$  mm do centro do eixo da peça. Isto é especialmente importante quando se corte para o centro.

### Ajuste da ferramenta

A ferramenta de corte e canal deve ser montada com um ângulo de  $90^\circ$  em relação ao eixo da peça.

### Balanço da ferramenta

Para uma estabilidade perfeita o balanço da ferramenta deve ser mantido o mais curto possível. A regra a seguir pode ser aplicada: balanço  $l_a$  não pode ser maior do que  $8 \times s$  (largura de corte).

## Balanço da ferramenta

De maneira a se evitar a vibração, a peça deve ser fixada com o mínimo balanço possível.

## Recomendações para operações de corte

Próximo ao diâmetro de 5 mm, reduza o avanço 'f' em aproximadamente 50%.

Não corte além do centro (risco de quebra).

Para cortes livres de pinos, use pastilhas R ou L.

Reduzir o avanço 'f' em aproximadamente 20% - 50% para minimizar a deformação lateral.

De maneira a se evitar a formação de anel, use pastilha R ou L.

Reduza o avanço 'f' em aproximadamente 20% - 50% para minimizar a deformação lateral.

## Recomendações para operações de canal

Nos canais com um deslocamento axial a largura 'a' deve ser pelo menos 70% da largura de corte 's'.

Nos canais de superfície inclinada o avanço deve ser diminuído em aproximadamente 20% - 50% no início.

### Profundidade de corte e canal reduzidas

Os módulos de corte e canal MSS são seleccionados por tamanho para se adequar a um determinado diâmetro da peça ( $D_{max}$ ). Se o diâmetro da peça é maior que o módulo de  $D_{max}$ , então a profundidade de corte e canal alcançada é reduzida pela dimensão 'a'. A extensão da redução é estabelecida por referência conforme tabela.

$T_{max}$  = profundidade máxima do canal  
 $D_{max}$  = Diâmetro máximo da peça com profundidade do canal total  $T_{max}$  ( $a = 0$ )  
 $a$  = profundidade reduzida do canal

$$T_{red.} = T_{max} - a$$

Tamanho da montagem	Diâmetro da peça (mm)																	
	35	40	45	60	75	115	>250											
E12	35	40	45	60	75	115	>250											
E16	50	55	60	70	80	100	130	200	>420									
E20	60	65	70	75	85	95	110	130	165	220	>330							
E25	75	80	85	90	100	110	125	140	160	190	240	320	>500					
E32	95	100	105	110	120	125	135	145	160	180	200	225	270	320	400	530	>800	
		0,5	1,0	1,5	2,0	2,5	3,0	3,5	4,0	4,5	5,0	5,5	6,0	6,5	7,0	7,5	8,0	

Redução da profundidade máxima do canal a (mm)

Diâmetro máximo da peça ( $D_{max}$ ) em caso de corte completo e profundidade de canal ( $T_{max}$ ) em mm

### Exemplo de cálculo: módulo

MSS-E25R21-GX24-3

E25 tamanho da montagem 25

21  $T_{max} = 21$  mm,  $\varnothing 75$  mm

$D = \varnothing 100$  mm

$$\Rightarrow T_{max} - a = T_{red.}$$

$$21 - 2 = 19 \text{ mm}$$

**Velocidade de corte ( $v_c$ )**

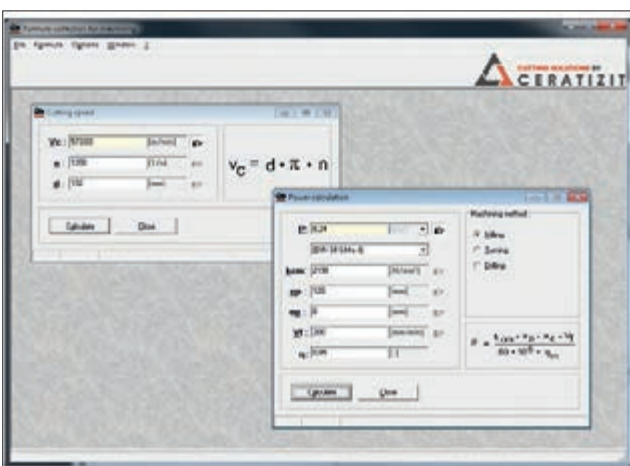

$$v_c = \frac{d_1 \cdot \pi \cdot n}{1000} \text{ [m/min]}$$

**Rotações por minuto ( $n$ )**

$$n = \frac{v_c \cdot 1000}{d_1 \cdot \pi} \text{ [rev./min]}$$

**Avanço ( $v_f$ )**

$$v_f = f \cdot n \text{ [mm/min]}$$

**Programa de Fórmulas CERATIZIT CT-CALC**

PC - cálculo de auxílio de parâmetros de usinagem

- o Velocidade de corte
- o Taxa de remoção do cavaco
- o Consumo de potência
- o Espessura média do cavaco

Idiomas

Abrasão no flanco, desgaste normal depois de um certo tempo de usinagem.

## Desgaste de flanco

### Razões

- Velocidade de corte muito alta
- Classe de metal duro com resistência ao desgaste insuficiente
- Avanços incorretos

### Soluções

- Reduzir a velocidade de corte
- Selecione a classe de metal duro mais resistente ao desgaste
- Adaptar o avanço para a velocidade de corte e profundidade de corte (aumentar avanço)

Por tensão mecânica excessiva na aresta de corte, fratura e lascamento podem ocorrer.

## Lascamento de aresta

### Razões

- Classe com resistência ao desgaste muito alta
- Vibração
- Avanço e profundidade de corte muito alta ou excessiva
- Danos por cavacos

### Soluções

- Use classe mais tenaz
- Use geometria de aresta negativa com quebra cavacos
- Reduza o balanço; verifique altura de centro
- Aumente a estabilidade da aresta de corte

O cavaco quente que está sendo evacuado causa craterização na face inclinada da aresta de corte.

## Craterização

### Razões

- Velocidade de corte e / ou avanço muito alto
- Ângulo de saída pequeno
- Classe com baixa resistência ao desgaste
- Refrigeração insuficiente

### Soluções

- Reduzir a velocidade de corte e / ou avanço
- Aumentar a quantidade de refrigeração e / ou pressão, otimizar fornecimento de refrigerante
- Usar classe com alta resistência à formação de craterização

Alta temperatura de usinagem e tensão mecânica simultâneas podem levar à deformação plástica.

### Deformação plástica

#### Razões

- Temperatura demasiadamente alta resultando no amolecimento do substrato
- Desgaste / baixa resistência ao calor da classe de metal duro
- Refrigeração insuficiente

#### Soluções

- Reduzir a velocidade de corte
- Escolha a classe de metal duro com maior resistência ao desgaste
- Aumentar a refrigeração

Aresta postiça ocorre quando o cavaco não é evacuado adequadamente devido à temperatura de corte insuficiente.

### Aresta postiça

#### Razões

- Velocidade de corte muito baixa
- Ângulo de saída muito pequeno
- Classe de metal duro errada
- Falta de refrigeração / lubrificação

#### Soluções

- Aumente a velocidade de corte
- Aumente o ângulo de saída
- Aplique cobertura TiN
- Utilize emulsão com concentração mais elevada

Entalhe na profundidade máxima de corte

### Entalhe

#### Razões

- Oxidação da aresta de corte
- Calor excessivo na aresta de corte

#### Soluções

- Utilize várias profundidades de corte
- Reduza a velocidade de corte
- Melhore o fornecimento de refrigeração

Os dados de corte não são indicações obrigatórias para o usuário. Recomenda-se adaptá-las as condições atuais.

## Configuração da ferramenta

### Ferramentas MSS 0°

- Grande balanço
- Perigo de colisão
- Necessário adaptador especial VDI

### Ferramentas MSS 90°

- Pequeno balanço
- Estabilidade aumentada
- Fixação normal é possível na haste VDI

## Profundidade canal e corte

### Módulo axial curto

- Pode ser fixado em apenas um lado
- Corte e canal profundidade máx. 15mm

### Módulo axial longo

- Pode ser fixado de ambos os lados
- Corte e canal profundidade máx. 21 mm

**Possibilidades de usinagem com módulo axial curto/longo**

**Possibilidades de usinagem com único módulo axial longo**

Dependendo do intervalo do diâmetro ou gama de largura um deslocamento axial (dimensão 'x') pode ser necessário quando se produz um segundo canal. A dimensão 'x' depende do diâmetro do canal e a altura da haste.

# Recomendação de aplicação

Sistema GX

Gama de diâmetro	
(D <sub>min</sub> - D <sub>max</sub> )	
50 - 70 mm	
70 - 100 mm	
100 - 150 mm	
150 - 300 mm	
300 - 900 mm	

**Importante:** o diâmetro indicado se refere ao diâmetro exterior do canal.

Gama de diâmetro	Tamanho da montagem MSS

máx. profundidade do canal	14	15			21		15		

**Observe:** o diâmetro do canal de face deve se situar dentro da gama de diâmetro indicado no módulo. Caso contrário, a ferramenta pode ser danificada ou destruída.

Módulo de canal axial correto

Módulo de canal axial incorreto

## Recomendação de aplicação para canal axial e torneamento de face

### Canal axial

so é possível dentro da gama de diâmetro para esse módulo (exemplo: 50 - 70 mm).

**Observação:** a gama de diâmetro indicado se refere ao diâmetro exterior do canal.

### Canal axial - alargamento do canal

Alargamento do canal é possível acima e abaixo da gama de diâmetro indicado no módulo.

**Observação:** apenas o primeiro canal deve estar dentro da gama de diâmetro do módulo. A profundidade do alargamento do canal não deve ser maior do que a profundidade do primeiro canal.

### Canal axial e torneamento de face

Quando o torneamos a face é possível alargar o canal acima e abaixo da gama indicado no módulo.

**Observação:** apenas o primeiro canal deve estar dentro da gama de diâmetro do módulo.

# MSS-AX

Características do produto, benefícios para o cliente

## Pastilha neutra

- Pode ser aplicada em ferramentas direitas e esquerdas
- Aplicação é independente do diâmetro do canal (posição da ferramenta é possível em x+ ou x-)
- Limitado apenas pelo  $D_{min}$  para primeira operação de canal

## Geometria -F50

- Aplicação universal, apropriado para todos os materiais
- Apropriado para canal e torneamento

## Ferramentas fornecidas com cobertura 'hard & tough'

- Máxima proteção ao desgaste
- Máxima resistência a corrosão

## Monobloco e ferramentas modulares

- Alta flexibilidade
- Solução de custo otimizado para cada aplicação

$T_{max}$	15 [mm]	21 [mm]

## Diferenças entre pastilhas de perfil completo e parcial

### Pastilha de perfil completo

- + Perfil completo da rosca incluindo o diâmetro externo. É usinado (sobremetal de 0.04 - 0.1 mm sobre o diâmetro final) + alta precisão do perfil
- + Aumento da vida útil da ferramenta graças ao raio de ponta maior
- + Rosca sem rebarbas
- Uma pastilha por passo

### Pastilha de perfil parcial

- + Uma pastilha para vários passos
- Portanto o perfil da rosca não segue exatamente o padrão
- O diâmetro externo (ou o diâmetro da rosca interna) não é usinado

## Tipos de aproximação

### Aproximação radial

- + Tornos convencionais
- + Com passos < 2 mm
- + Com materiais de cavacos curtos
- Reduzido controle de cavaco

### Aproximação de flanco

- + Aproximação com preferência em máquinas CNC
- + Com passos de 2 a 4 mm
- + Materiais de cavacos longos
- + Bom controle de cavaco

### Aproximação alternada

- + Com passos > 4 mm
- + Materiais de cavacos longos
- + Desgaste da pastilha uniforme
- + Longa vida da ferramenta
- + Bom controle de cavaco
- Programação NC mais complexa

	<b>Passo [passes/polegada]</b>	14	12	11	10	9	8	7	6
<b>Número de cortes</b>	8	9	10	11	12	12	12	12	14
	↓	↓	↓	↓	↓	↓	↓	↓	↓
<b>Altura do perfil da rosca</b>	1,22	1,46	1,56	1,80	2,03	2,31	2,40	2,89	3,56

Estes são os valores recomendados para usinagem de aço

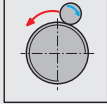

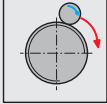

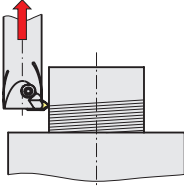

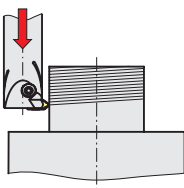

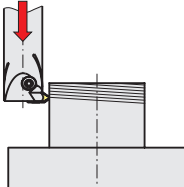

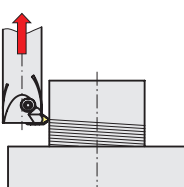

### Métodos de aplicação para usinagem externa

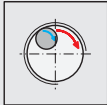

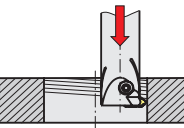

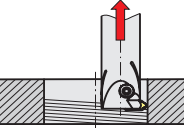

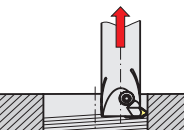

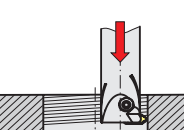

### Métodos de aplicação para usinagem interna

**Rosca externa**

	Fresamento discordante	Fresamento concordante
		
Rosca direita		
Rosca esquerda		

**Rosca interna**

	Fresamento discordante	Fresamento concordante
		
Rosca direita		
Rosca esquerda		

### Furação - rosca em furo passante

### Furação - rosca em furo cego

### Rosca furo passante

Mergulho radial não é necessário, aproximação radial acima ou abaixo da peça de trabalho + movimento espiral

### Rosca furo cego

Aproximação radial até a profundidade total do perfil + movimento espiral  
Mergulho radial + movimento espiral

### Vantagens em comparação para pastilhas de rosca multi-dentes

Reajuste possível quando necessário

- Mesma pastilha para torneamento e fresamento de rosca
- Considerável custo mais baixo de pastilhas TC
- Rosca é formado em um único passo a partir do exterior para interior ou vice-versa
- Baixa força de corte possível através do fresamento da rosca num único dente
- Condições estáveis
- Alcance padrão é 2xD. Ferramentas podem ser modificadas até 3xD.
- Valores de cortes mais altos (vc + f) desta maneira os tempos de usinagem são similares aos das usinagens com pastilhas multi-dentes
- Programação fácil

# MSS-SX

Como utilizar o sistema

Insira a chave de montagem com alça para frente em direção aos 2 pontos de localização da ferramenta.

Ao mover a chave de montagem na direção das setas do alojamento da pastilha é aberta.

Posicione a pastilha pressionando até a face de encosto.

Movendo a chave de montagem para frente o alojamento da pastilha se fecha e a pastilha é fixada de forma segura.

O sistema de fixação é projetado de tal maneira que a chave de montagem pode ser inserido na lâmina de ambos os lados.

### A seleção da ferramenta correta

Ferramenta direta R

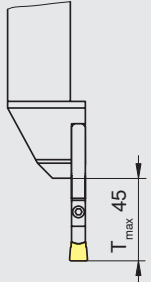

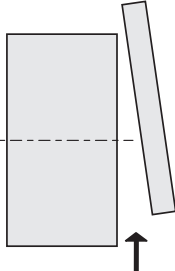

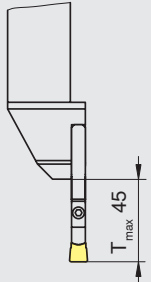

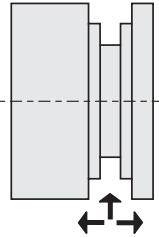

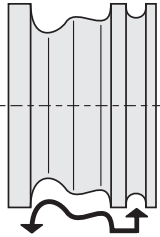

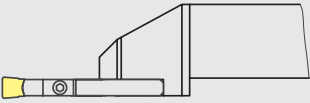

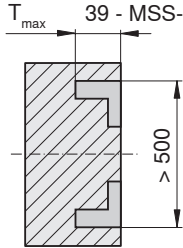

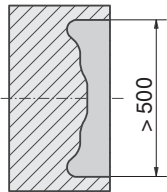

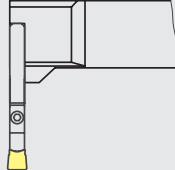

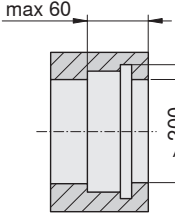

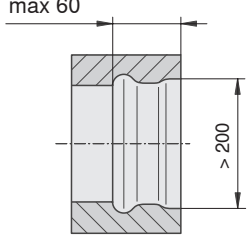

Versão

## Aplicações possíveis para adaptadores MSS

Adaptadores MSS oferecem a possibilidade de aplicar o módulo do sistema de corte e canal onde hastes de ferramentas convencionais ou cabeças de ferramentas Maxiflex UTS não podem ser utilizadas.

### Exemplos

- Soluções especiais de todos os tipos
- Ferramentas e hastes especiais
- Ferramentas rotativas para fresamento circular
- Máquinas especiais
- Espaço limitado

### Exemplo de montagem

Adaptadores em combinação com haste VDI

## Tipo de montagem A

- Para cargas baixas ou médias
- Adaptador ajustável

## Tipo de montagem B

- Para usinagem pesada (grande corte e canal profundo)
- Adaptador não ajustável
